Llewelyn-Davies Sahni, Inc. (LDS) is involved in transit-oriented development around the world, taking into account the environmental impact on street improvements, transit facilities, rail systems, and all associated amenities such as sidewalks, lighting, landscape/hardscape and signage.

Wide-ranging issues need to be addressed upfront in connectivity development. These include tourism, recreation planning, landscaping, zoning and land use regulations, subdivision planning, land development programs, urban development impact studies, healthcare and educational facilities and needs, urban revitalization, etc.

Planners, architects, landscape architects, engineers, economists and analysts are the visionaries and methodical thinkers behind the scene. These technically savvy and detailed-oriented specialists join their resources and talents to develop the best possible solution to the challenge, offering a unique insight into the needs and potential solutions, and incorporating the vision, values and goals of a city and its people. Each plays an important role, but not one can stand alone when it comes to developing a roadway system that connects the citizens of a community.

Walkable streets, inviting public spaces and connections to transit all form the urban fabric that make up the diverse neighborhoods of metropolitan areas and are vital to the success of a transportation system. What makes a system a system, and not simply a collection of elements, are the connections and interactions between its components, as well as the effect these linkages have on its environment.

Harris County METRO

METRO Intermodal Facility

City of Houston Pierce Street

**What makes a transit system a system are the connections and interactions between its components and the tension between activities.**

City of Houston Austin Street

Connecting urban and suburban communities into a cohesive unit takes a great deal of planning, strategizing and cooperation.

Gulfgate/IH 610 Pedestrian Walkway

San Antonio TriParty

**LDS has been involved in major transportation/transit-oriented developments for:**

- City of Houston
- Harris County Metropolitan Transit Authority
- San Antonio Triparty
- Houston Airport System
- Texas Department of Transportation
- Harris County Improvement District #1
- Greater East End Management District
